

Model Number

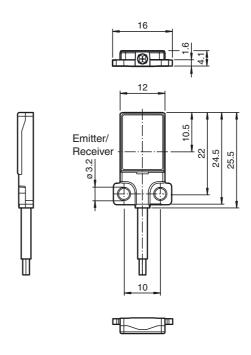

OBE500-R3F-SE2-L

Laser thru-beam sensor with 2 m fixed cable

Features

- · Very flat design for direct mounting without mounting bracket
- DuraBeam Laser Sensors durable and employable like an LED
- TEACH-IN
- Detection of partially transparent objects by teach-in
- Detection of small parts or flat objects from 0.25 mm

Dimensions

Electrical connection

Laser thru-beam sensor **Technical data** System components Emitter OBE500-R3F-S-L OBE500-R3F-E2-L General specifications Effective detection range 0 500 mm Threshold detection range 700 mm Light source LASER LIGHT modulated visible red light, 680 nm Light type Laser nominal ratings LASER LIGHT, DO NOT STARE INTO BEAM Laser class 680 nm Wave length Beam divergence > 5 mrad Pulse length approx. 3 μs Repetition rate approx. 16.6 kHz max. pulse energy 8 nJ Angle deviation approx. 0.5° typ. starts from 0.5 mm; typ. from 0.25 mm (after teach-in) Object size approx. 3 mm at a distance of 500 mm Diameter of the light spot Angle of divergence approx. 1 Optical face frontal EN 60947-5-2: 25000 Lux Ambient light limit Functional safety related parameters $MTTF_d$ 806 a 20 a Mission Time (T_M) 0 % Diagnostic Coverage (DC) Indicators/operating means Operation indicator LED green, statically lit Power on , short-circuit : LED green flas-Function indicator Receiver: LED yellow, lights up when light beam is free, flashes when falling short of the stability control; OFF when light beam is interrupted **Electrical specifications** 12 ... 24 V Operating voltage U_B Emitter: ≤ 10 mA No-load supply current I₀ Receiver: ≤ 8 mA Protection class

Test of switching function at 0 V

1 PNP output, short-circuit protected, reverse polarity protected,

Teach-In Methods

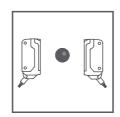

The thru-beam sensor enables the switching points to be taught in for optimum adaptation to specific applications. This eliminates the need for additional components such as apertures.

The sensitivity of the thru-beam sensor can be adjusted using three Teach-in methods:

Position Teach

When using this Teach-in method, the following settings are made on the thru-beam sensor:

- The gain is set to an optimum value
- The signal threshold is set to a minimum

Recommended application:

This method enables minuscule particles in the beam path to be detected, and provides exceptional positioning accuracy.

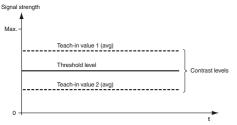

Make sure that there are no objects in the beam path and that the sensor is connected to the power supply.

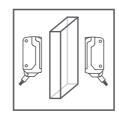

- Connect the white cable on the receiver (WH/IN) to the blue cable (BU/0 V) on the receiver.
 The green and yellow LED indicators flash simultaneously at 2.5 Hz
- Disconnect the white cable on the receiver (WH/IN) from the blue cable (BU/0 V) on the receiver.
 The green and yellow LED indicators flash alternately at 2.5 Hz
- 3. The end of the Teach-in process is indicated when the green LED indicator lights up sold and yellow LED blinks.

Two-Point Teach-In

When using this Teach-in method, the following settings are made on the thru-beam sensor:

- · The gain is set to an optimum value
- · The signal threshold is set in the center between the two taught signal values

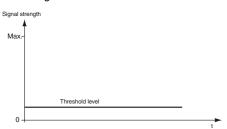

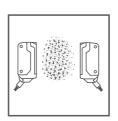

- 1. Make sure that there are no objects in the beam path and that the sensor is connected to the power supply.
- Connect the white cable on the receiver (WH/IN) to the blue cable (BU/0 V) on the receiver.
 The green and yellow LED indicators flash simultaneously at 2.5 Hz
- 3. Position the object in the beam path.
- Disconnect the white cable on the receiver (WH/IN) from the blue cable (BU/0 V) on the receiver.
 The green and yellow LED indicators flash alternately at 2.5 Hz
- 5. The end of the Teach-in process is indicated when the green LED indicator lights up sold.

Maximum Teach-In

When using this Teach-in method, the following settings are made on the thru-beam sensor:

- · The gain is set to a maximum
- The signal threshold is set to a minimum

Recommended application:

Enables an object to be detected with a high excess gain. This can be useful if there is severe environmental contamination or to achieve long operating times.

Make sure that there are no objects in the beam path and that the sensor is connected to the power supply.

- 6. Cover the receiver or transmitter.
- 7. Connect the white cable on the receiver (WH/IN) to the blue cable (BU/0 V) on the receiver. The green and yellow LED indicators flash simultaneously at 2.5 Hz
- 8. Disconnect the white cable on the receiver (WH/IN) from the blue cable (BU/0 V) on the receiver. The green and yellow LED indicators flash alternately at 2.5 Hz
- 9. The end of the Teach-in process is indicated when the green LED indicator lights up sold.

Laser notice laser class 1

- The irradiation can lead to irritation especially in a dark environment. Do not point at people!
- Maintenance and repairs should only be carried out by authorized service personnel!
- Attach the device so that the warning is clearly visible and readable.
- The warning accompanies the device and should be attached in immediate proximity to the device.
- Caution Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation

exposure.
